# Cloud-Based Backup

## A Premium Solution for Protecting Your Most Critical Data

Next to your people, data is your company's most valuable asset. As an IT service provider, your team is responsible for the systems, application files and databases that support your business. Unfortunately, the legacy backup solutions you use today to protect them simply do not provide the level of security or scalability needed to meet the industry's growing compliance standards. Your company's evolving continuity strategy demands that you re-examine how you plan to keep your data safe in the event of disruption. With so many cloud-centric options out there, however, how do you know you're choosing the right one? The answer lies in choosing a partner who understands your situation and knows how to help.

## Give Your Backups the White-Glove Treatment

PROTECT from Arraya Solutions is an enterprise-class, cloud-based backup solution that provides reliable, efficient and secure protection of your company's data. PROTECT blends industry-leading cloud technology with a flexible consumption model, ensuring you only pay for what you use. And unlike our competitors, we won't charge you a dime for restores. The end result? A fast and efficient backup and recovery solution that won't break the bank.

## What are the Benefits?

Arraya's Cloud-Based Backup Solution is:

- **Flexible Yet Secure.** Backups are immediately and automatically verified and strong 256bit AES data encryption ensures safe long-term retention. Plus, PROTECT boasts a library of supported OSes and applications to allow it to stand tall in most IT environments.

- **Cost-Effective and Transparent.** Forget about hidden charges. PROTECT customers pay a single monthly cost that includes all necessary licensing, maintenance, administration and retention. In addition, that monthly fee also covers unlimited restoration of systems, files and application data.

- **An IT Time-Saver.** Your company's files and directories are restored with a few clicks of a mouse through our PROTECT web-based portal. Also, data is de-duplicated at the source, reducing backup times by up to 10x and reducing network bandwidth up to 500x.

- **Easy to Monitor.** Full backup and recovery process information is available on demand via interactive dashboards, giving IT at-a-glance insight into the health and security of data.

- **On the Case 24/7.** If something goes wrong and restore assistance is required, Arraya's Managed and Operational Services Team is available around the clock to step you through the process, tackle issues and help manage changes.

## Why Arraya?

Arraya Solutions is a full service technology consulting firm capable of meeting the needs of customers of all sizes, across a wide range of industries. We work *with* our customers, not *for* them, to create and deploy solutions which satisfy their particular business needs and goals.

**We Get to Know You.** We take the time to understand your business' unique pain points. Based off of that knowledge, we create a custom strategy to help your company reach its fullest potential and vision.

**Experience You Can Count On.** Arraya's Managed and Operational Services Team is made up of well-qualified engineers with certified technical knowledge and hands-on experience supporting customers both on-premises and remote. They undergo a rigorous selection and training process that matches their capabilities to specific customer engagement(s) to ensure business expectations are met.

**Elite Managed Services Provider.** Arraya has been named year over year to CRN's Managed Service Provider (MSP) 500 list as one of the MSP Elite 150. This list distinguishes the top technology providers whose leading approach to managed services enables their customers to improve efficiencies, cut costs, and successfully leverage technology to achieve greater competitive advantage.
