

Enterprise Mobility Pilot Program

The Enterprise Mobility Suite (EMS) Pilot Program helps customers plan and implement scalable EMS environments capable of providing today's workforce with the mobility it craves, while enhancing IT's ability to secure and manage data and mobile applications across a wide range of devices. Arraya's EMS approach gives IT the control it needs, while giving end-users the flexibility they want.

Arraya's EMS Pilots are seven-day engagements that build production-ready, Microsoft-powered EMS environments which feature:

- **Azure Active Directory Premium** — Functional set up and configuration of the service, plus two SaaS based applications for Single Sign On.
- **Microsoft Intune** — Complete set up, including SCCM integration if applicable, along with a sample mobile device policy and the enrollment of five devices (iOS, Android and Windows Phone).
- **Azure Rights Management Services** — Complete set up with sample configurations for SharePoint 2010/2013 or SharePoint Online/OneDrive, Windows 2012 file shares, and Exchange 2010/2013 or Exchange Online.

What Happens Next?

Once a Pilot ends, a customer receives a document which outlines the configuration steps, including any customized policies that were implemented. Arraya's team then sits down with the customer and goes through the document with them, building customer confidence in expanding their Pilot into Production.

Arraya's EMS Pilot Program is driven by a Service Brief that closely aligns with Microsoft's EMS Activation Guide in order to allow customers to start taking immediate advantage of the main benefits of EMS, including:

- The ability for employees to register, enroll and manage their devices, regardless of platform.
- A Single Sign On infrastructure for SaaS (Software as a Service) applications that can be backed by the existing Active Directory that is now extended into the Cloud.
- Corporate data, including Exchange email, SharePoint content and Windows files, can be secured using compliance policies set by the administrator.
Both on-premises and Cloud services can be protected.
- Little to no internal infrastructure or hardware investment is required to get things up and running.
- If System Center Configuration Manager is already installed, it can be integrated with Intune to provide a consistent mobile device and application management experience.

Let Us Help You Reach Your Goals

Arraya Solutions is a full service technology consulting firm which can meet the needs of customers of all sizes, across a wide range of industries.

We work *with* our customers, not *for* them, to create and deploy solutions which satisfy their particular business needs and goals.

Our Microsoft practice has the depth and experience needed to assess the state of customers' existing environment and recommend and implement the right solutions and services needed to help them achieve their specific IT goals. The members of our Microsoft team have amassed an impressive number of individual certifications and overall our practice has been recognized as a Microsoft Gold Partner in Datacenter and a Silver Partner in Messaging and Collaboration & Content.
