Disaster Recovery Validation

Every organization needs a disaster recovery (DR) plan in place. They also need to know that plan will perform as expected when it's needed most. That level of confidence can't be achieved simply by putting a pen to paper. Instead, it can only come from regular testing and incremental updates.

DR plans subjected to regular testing have success rates 132% higher than untested plans. Admittedly, devoting time and resources to testing DR can be a big ask. The cost of not doing so can be even greater.

MAINTAIN PEACE OF MIND EVEN IN A WORST-CASE SCENARIO

Arraya Solutions' Disaster Recovery Validation Service can help organizations vet the scope and effectiveness of DR plans. During this engagement, Arraya can assist with right-sizing strategies based on actual business impact and potential lost revenue. Participants will come away with the documentation, procedures, and technical recommendations needed to take their strategy from conceptually strong to ready for action.

As part of the Disaster Recovery Validation Service, Arraya will work alongside organizational staff to:

- gather information necessary to identify organizational need as well as assess current DR capabilities

- define scope, participants, scenario, agenda, and method for capturing results generated by DR testing

- validate processes, procedures, and technologies currently in place to ensure expected performance in a true disaster recovery scenario

- create an executive-oriented blueprint covering objectives, company-wide resource requirements, target dates, and ultimately, results

- build out a comprehensive, ongoing testing strategy that prioritizes high-value, high-risk systems and thoroughly outlines all testing cycles

WHY LEVERAGE ARRAYA'S DISASTER RECOVERY VALIDATION SERVICE?

Arraya's DR Validation Service is supported by our Advisory Services team. Our team has compiled years of consulting experience, earned while partnering with organizations both large and small, across a range of industries. We bring this knowledge to every engagement we undertake in order to properly position all customers for short and long term IT success.
