Arraya

Azure Site Recovery Pilot Program

The Azure Site Recovery (ASR) Pilot Program helps customers plan and implement a simplified cloud-based Disaster Recovery as a Service solution. Imagine a DR strategy that can scale on demand and doesn't involve investing in redundant hardware or an expensive commitment to a colocation facility.

Arraya can help make this a reality.

Microsoft

Arraya's ASR pilots are risk-free, three-day sessions that build production-ready, Microsoft-powered disaster recovery environments. These engagements feature:

- Azure Site Recovery on-prem components for Hyper-V, VMware, or physical servers.

- Enablement of Azure Site Recovery services in Azure. No Azure footprint today? No problem! We can help you with that, too.

- Configuration of automated and/or manual recovery plans for pilot workloads as well as complete failover and failback testing and validation, all in an isolated environment to eliminate risk to participants.

- Education about the platform, its capabilities, and best-practices when moving from pilot to production.

What Happens Next?

Once a pilot ends, a customer receives a document which outlines the configuration steps, including any customized policies that were implemented. Arraya's team then sits down with the customer and goes through the document with them, building customer confidence in expanding their pilot into production.

What Are The Benefits?

Arraya's Azure Site Recovery Pilot Program is driven by a Service Brief that closely aligns with Microsoft's best practices in order to allow customers to start taking immediate advantage of the main benefits of ASR, including:

- Protection of supported Windows or Linux workloads in Azure

- Recovery Point Objects as low as 30 seconds

- Recovery Time Objectives measured in minutes and hours, not days or weeks, for critical applications

- The ability to run workloads in the cloud indefinitely during a disaster, scaling up and down on demand

- Failback to on-prem hardware after recovery from a disaster is completed

- Planned and unplanned failover as well as isolated cloud DR tests

Let Us Help You Reach Your Goals

Arraya Solutions is a full service technology consulting firm which can meet the needs of customers of all sizes, across a wide range of industries. We work *with* our customers, not *for* them, to create and deploy solutions which satisfy their particular business needs and goals.

Our Microsoft practice has the depth and experience needed to assess the state of customers' existing environment and recommend and implement the right solutions and services needed to help them achieve their specific IT goals. The members of our Microsoft team have amassed an impressive number of individual certifications and overall our practice has been recognized as a Microsoft Gold Partner in Datacenter, Cloud Platform and Cloud Productivity, and a Silver Partner in Messaging and Collaboration & Content.
