

## Desktop Infrastructure Virtualization Assessment

Gain detailed knowledge of your end-user environment and an understanding of which users and desktops will benefit most from virtualization.

The Desktop Infrastructure Virtualization Assessment Service is the first step in a set of professional services designed to help you achieve the maximum benefit of virtualization technologies with the minimum impact on your end-user community. Though it can be performed as a standalone service, it is intended to function as the cornerstone for follow-up professional services such as a desktop virtualization Pilot or a Plan and Design engagement.

Give users flexibility, while maintaining control.

### OVERVIEW

The Desktop Infrastructure Virtualization Assessment helps customers begin the process of moving to a virtual desktop infrastructure (VDI) environment by identifying both the users and desktops which are the best candidates to move into a virtual desktop environment, and the order in which those user groups and desktops should be virtualized to ensure broad satisfaction in your user community and success of your desktop virtualization initiative.

### DELIVERABLES

The Desktop Infrastructure Virtualization Assessment service will:

- Assist you in defining end user use cases
- Classify end user groups and determine virtualization candidacy
- Analyze your environment to determine readiness for a VMware Horizon rollout
- Provide a requirements and recommendations report

## OUR APPROACH

**INTERVIEW** – Arraya’s consultant starts by identifying your business drivers to gain a clear understanding of the current infrastructure, end-users, applications, and project and technical requirements.

**COLLECT** – Our consultants use a combination of assessment questionnaires, VMware tools and third-party toolsets to gather information to define end-user use cases and user and application candidacy. They collect inventory, usage and performance data regarding desktop inventory, end-user and application environments.

**ANALYZE** – We apply project requirements to the current environment and perform a gap analysis, application and user analysis. Users will be grouped into use cases depending upon their requirements, and each use case is assigned attributes to represent those requirements. Users and/or desktops are classified candidates and non-candidates based upon many factors and an assessment report is provided to document their candidacy.

**REPORT** – Our consultants create a detailed summary report on your end-user environment, and create and provide recommendations on how best to move forward with the desktop virtualization deployment. The end result will provide you with a detailed knowledge of your end-user environment and an understanding of which users and desktops are appropriate for virtualization.

## DISCOVER ARRAYA

At Arraya Solutions, we began with a simple vision: To combine technological expertise and personal service that would empower our customers to solve their individual IT challenges. The result is more than 15 years of growth and solutions-driven results that have made us one of VMware’s best partners.

Serving the Mid-Atlantic region, we work with clients of all sizes, across all industries. Our passion for superior knowledge of the IT industry has led us down a path of tremendous growth, but we still make it a priority to keep our small-business roots—ensuring every customer receives the personal attention it deserves. Discover how our partnership with VMware can empower your business for greater success!

*We’ve worked hard to give our diverse customer base customized IT solutions.*

*How can we help you?*
