

## ENTERPRISE SECURITY ADVISORY SERVICES

Security threats grow and evolve every day. As the challenge of defending against these threats increases, businesses can no longer rely on technology solutions alone. An effective cyber security strategy covers everything from policy, awareness, governance, all the way through the solutions themselves. Additionally, sifting through the wealth of available security solutions to determine what to buy and how to integrate it is a full time job. It can be difficult – and expensive – to find security professionals with the skills and expertise needed to accomplish all of those objectives.

Arraya's Cyber Security Practice has experience in every facet of this process. We work with C-Suite leadership teams to develop and implement security programs, architectures, and solutions — all to deter today's threats.

### Security Strategy Assessments

Arraya's approach to building an information security program starts with engaging the executive leadership team to define the organization's critical information and infrastructure assets and the risks facing each. This approach assesses strategic areas of concern before recommending technical solutions. By defining the business needs first and then aligning technical solutions to them, we can pinpoint where to allocate IT resources to ensure real value. This approach also provides a feedback loop for the leadership team so they can stay fully engaged with the program.

**Arraya Security Strategy Assessments analyze:**

- Information Security Risk Management
- Governance, Policy, and Training Awareness
- Security Architecture and Systems
- Vendor Security and Oversight
- Incident Response
- Security Monitoring and Reporting

## CISO AND CYBER SECURITY EXPERTISE

Many companies want to leverage best in class security expertise without the burden of building an entire security staff from the ground up. Arraya's Cyber Security Practice offers businesses the ability to do just that. Arraya's Advisory Services enable organizations to gain the expertise of a seasoned CISO at a fraction of the cost of hiring one. Additionally, Arraya's Cyber Security Advisory Services can work across departments and organizational roles to develop world-class, holistic security solutions.

## Why Arraya?

At Arraya Solutions, we began with a simple vision: To combine technological expertise and personal service that would empower our customers to solve their individual IT challenges. The result is more than 15 years of growth and solutions-driven results — providing IT departments with the intelligence, tools and resources they need to deliver value back to their business and elevate IT from a position of support, to one of leadership.

Serving the mid-Atlantic region, we work with clients of all sizes, across all industries. Our passion for superior knowledge of the IT industry has led us down a path of tremendous growth, but we still make it a priority to keep our small-business roots — ensuring every customer receives the personal attention it deserves. Our success stems from our experienced and highly trained staff, our innovative outside the box approach and our partnerships with the industry's leading technology providers.

Security Advisory Services team with real world experience at the CISO level

Member of CRN's Solution Provider 500, Tech Elite 250, and Managed Services Provider 500 lists year after year

Tailored enterprise solutions that distinguish us from other consultants, who focus solely on selling point hardware and software products

Structured but Nimble—the expertise of a large company with the personal attention and agility our customers have come to depend on
