

Arraya Solutions and the vRNI Assessment: Securing Your Steps Toward Virtualization

When it comes to planning for the future of your data center, there’s no better time to start than now. As network virtualization has become commonplace in our related conversations, so have concerns like breaches, costs, and ever-increasing volumes of data. As you consider your IT strategy and look to create a corresponding roadmap, Arraya Solutions can help you to build and manage your ideal infrastructure—allowing you to achieve your departmental and corporate goals seamlessly and securely.

One way we can get you off on the right foot is with our comprehensive network assessment program, featuring vRealize Network Insight from VMware. By working together, this complimentary evaluation will offer the clear understanding of your current state, so that you can optimize the productivity and profitability of your IT organization.

Know Where You Stand, and the Path Forward

vRNI helps you to visualize traffic flows and micro-segmentation, and to also uncover any issues, bottlenecks, or gaps. Arraya can essentially provide you with a picture of what’s working, what’s not, and what can be changed to improve the process. Our evaluation spans:

<p>Pre-deployment insight into data center traffic flows to enable faster NSX deployments with micro-segmentation planning</p>	<p>Optimization of network performance and availability with visibility and analytics across virtual and physical networks</p>
<p>Post-deployment monitoring of the software-defined network, preventing problems before they happen, and lowering the time to resolution should trouble occur</p>	<p>Planning and recommendations for implementing micro-segmentation security, plus operational views to quickly and confidently manage and scale VMware NSX deployment</p>

Assessment Steps:

Step 1: Start the Discussion

In this meeting, Arraya's team of experts will outline your current network state and goals.

Step 2: Assessment

We'll then probe your network, listen to traffic flows, and identify security vulnerabilities using vRNI.

Step 3: Recommendation

Lastly, Arraya provides future state recommendations and actionable insights.

Who Would Benefit?

If you're an IT leader looking to improve network availability and application deployment, or a CIO considering a transition to a hybrid environment, this assessment could be very beneficial to your efforts.

About Arraya Solutions

Arraya Solutions is a leading Mid-Atlantic technology consulting firm and managed services provider that can meet the needs of customers of all sizes, across a wide range of industries. At Arraya, we work with our customers, not for them, to develop and implement the best solutions to satisfy their particular business needs, objectives, and goals. In the process, we educate, engage, and empower IT departments and entire companies to succeed.

Running vRealize in your environment starts the process of planning a cloud or data center project. Many companies aren't completely sure what they have in their environment so we've made it easy. vRealize scans your entire infrastructure and gives you a complete inventory of your IT assets so that you know what you can move to the cloud or migrate across your data centers.
